INTRODUCTION

Objective of the Study The primary objective of the study was to ascertain the extent of the public's awareness and knowledge of the Central Intelligence Agency.

Specific Objectives of the Study The study had seven specific objectives, as follows:

- 1) To ascertain the number of adults who are familiar with the CIA and what it does.
- 2) To find out among those adults who are familiar with the CIA whether they know if it operates here in the United States or abroad, or both.
- 3) To determine whether they think the CIA is responsible to the President or is free to act entirely on its own.
- 4) To find out how good a job they think the CIA is doing.
- 5) To ascertain how important a job they think the CIA performs.
- 6) To learn whether they think other countries have an organization similiar to the CIA, and, specifically, if they think Russia has such an organization, and,
- 7) To determine the esteem in which the public holds the CIA, based on whether they would like to have a son work for the agency.

Design of
the Research

The findings in the survey are based on personal interviews with 1,570 adults selected in such a manner that, as a group, they constitute a close approximation to the U.S. adult civilian population.

The details of the sample, how it is distributed by regions of the country, city size, age, occupation of chief wage-earner, annual family income, and so on and a description of the manner in which it was drawn appear in the Technical Appendix of the report.

Interviewing for the study was conducted during the period from August 25 through September 2, 1964.

The following questions were asked:

1. "Have you ever heard or read anything about the Central Intelligence Agency -- sometimes called the C.I.A.?"
2. (IF YES) "Just in your own words -- what does it do?"
3. "Do you happen to know whether it operates here in the United States or abroad, or both?"
4. "Is the agency responsible to the President, or is it free to act entirely on its own?"
5. "Based on what you have heard or read, how good a job is the C.I.A. doing -- very good, fairly good average, or poor?"
6. "How important a job would you say the C.I.A. performs -- very important, fairly important, or not too important?"
7. "Do you think other countries have an organization like the C.I.A. which obtains information about the United States?"
8. "Do you think Russia has an organization like the C.I.A., or not?"
9. "Assuming that he qualified, would you like to have a son of yours work for the C.I.A., or not?"

Tables of recommended sampling tolerances to have in mind while reading the report appear in the Technical Appendix.

The following estimate, as of September 1, 1964, can be used for the purpose of projecting percentages into number of people:

National adult civilian
population, age 21 and
older, excluding the in-
stitutional population

110,200,000

SUMMARY OF FINDINGS

1. Fifty-eight per cent of adults say they have heard or read about the Central Intelligence Agency, while 42 per cent have not.

Awareness of the CIA is proportionately higher among young adults age 21 to 29 years, among college-trained persons, among persons living in the West, and among persons in the professional and business occupation group:

Table
Page
13

	Per Cent <u>Familiar</u>
21 to 29 years	67
30 to 49 years	61
50 years and older	52
College	87
High school	63
Grade school	35
East	62
Midwest	55
South	49
West	71
Professional & Business	81
White-collar	65
Manual workers	51
Farmers	45
Non-labor force	43

2. More than one out of three persons who are familiar with the CIA said that the agency is a "spy outfit" that obtains vital information about other countries.

When those persons who said they are familiar with the CIA were asked, "Just in your own words -- what does it do?", 36 per cent answered that it is a "spy outfit." About one person in five among those familiar with the CIA, 20 per cent, said it "investigates persons in top Government jobs," 8 per cent said it "investigates everything to protect U.S. interests," and 7 per cent said it "keeps tab on activities around the world." Two per cent made specific mention of CIA activity in Cuba.

About one person in four who had heard or read about the CIA, 25 per cent, was unable to say what it does.

Table
Page
14

3. More than six out of ten persons who are familiar with the CIA said the agency operates both in the United States and abroad.

Persons in the survey who were familiar with the CIA were next asked, "Do you happen to know whether it operates here in the United States or abroad, or both?"

Table
Page
16

Sixty-three per cent said the agency operates both in the United States and abroad, while 9 per cent answered that it operates in the United States and a similar proportion answered that it operates abroad.

Again, proportionately more college-trained persons (74 per cent) answered that the agency operates both in the United States and abroad than is the case among those persons with less formal education.

More than seven out of ten persons living in the West (73 per cent) said the CIA operates both in the United States and abroad.

4. Among those persons familiar with the CIA, the weight of opinion holds that the agency is responsible to the President.

When respondents who were familiar with the CIA were asked, "Is the agency responsible to the President, or is it free to act entirely on its own?", 49 per cent said the agency is responsible to the President, while 18 per cent said it is free to act entirely on its own, and 33 per cent said they did not know.

Table
Page
18

Proportionately more college-trained persons who are familiar with the CIA think the agency is responsible to the President than is the case among those persons with less formal education:

	<u>Responsible to President</u>	<u>Free To Act</u>	<u>Don't Know</u>
	<u>%</u>	<u>%</u>	<u>%</u>
College	57	18	25
High school	51	16	33
Grade school	35	21	44

5. Slightly more than half of those persons who are familiar with the CIA think the agency is doing a "very good" or "fairly good" job.

Persons familiar with the CIA were next asked, "Based on what you have heard or read, how good a job is the CIA doing -- very good, fairly good, average, or poor?"

Table
Page
20

Twenty-one per cent rated the agency as doing a "very good" job, 31 per cent said it is doing a "fairly good" job, and 14 per cent rated the job the agency is doing as "average."

Less than one person in ten who were familiar with the agency, 8 per cent, rated the job CIA is doing as "poor," while about one out of four, 26 per cent, expressed no opinion.

6. More than six out of ten persons who are familiar with the CIA think the agency performs a "very important" job.

When persons who were familiar with the CIA were asked, "How important a job would you say the CIA performs -- very important, fairly important, or not too important?", 63 per cent said "very important," 16 per cent said "fairly important," 3 per cent said "not too important," and 18 per cent said they did not know.

Table
Page
22

The view that the CIA performs a very important job is proportionately higher among college-trained persons and persons in the professional and business occupation group, as follows:

	<u>Per Cent Saying "Very Important"</u>
College	75
High school	61
Grade school	55
Professional and Business	73
White-collar	70
Manual workers	60
Farmers	39
Non-labor force	49

7. More than eight out of ten persons who are familiar with the CIA think that other countries, including Russia, have organizations like CIA which obtain information about the United States.

Respondents who were familiar with the CIA were asked, "Do you think other countries have an organization like the CIA which obtains information about the United States?"

Table
Page
24

Eighty-four per cent answered yes, while one per cent said no, and 15 per cent said they did not know.

When asked specifically about Russia having an organization like the CIA, 85 per cent answered yes, while one per cent said no, and 14 per cent said they did not know.

Table
Page
26

The belief that other countries have organizations like the CIA which obtain information about the United States is proportionately higher among college-trained persons and among persons in the professional and business occupation group.

8. The weight of sentiment among persons who are familiar with the CIA holds that they would like to have a son of theirs work for the CIA.

To ascertain the esteem in which the public holds the CIA, respondents who were familiar with the agency were asked, "Assuming that he qualified, would you like to have a son of yours work for the CIA, or not?"

Table
Page
28

Forty-six per cent said they would, while 25 per cent said they would not, and 29 per cent expressed no opinion.

Some typical volunteered comments:

"It would be a good thing. He would be doing something for his country." (Woman, 60, Entrat, Washington)

"That's like saying, would you want your son to be President?" (Woman, 25, Tampa, Fla.)

"It should be fascinating." (Woman, 41, Sarasota, Fla.)

"If this was the type of work he wanted to do." (Woman, 43, Norfolk, Va.)

"It would be interesting, intriguing and important work." (Man, 48, Knoxville, Tenn.)

"I wouldn't object, but I wouldn't encourage it." (Man, 67, Liberal, Kans.)

"If he were qualified, yes." (Man, 63, Madison, Ind.)

"It is a top organization." (Man, 60, Halma, Minn.)

"It would be an honor but dangerous." (Man, 41, Toledo, Ohio)

"To protect the country, yes." (Man, 51, Pittsburgh, Pa.)

"It's important top secret work." (Man, 68, Wilmington, Del.)

"I wouldn't enjoy it, but I'd be proud if he did." (Woman, 83, Wethersfield, Conn.)

"It's up to the boy." (Man, 24, Bound Brook, N.J.)

"Because he would be helping the country." (Man, 45, Boylston, Mass.)

"It would be dangerous." (Woman, 23, Sparks, Nev.)

"The risk is too high for the remuneration." (Man, 65, Salt Lake City, Utah)

"No one wants their child to go into dangers like that." (Woman, 25, North Hollywood, Calif.)

"Just on general principles, I object to my son spying." (Man, 36, Brazoria, Tex.)

"Too dangerous." (Woman, 23, Atlanta, Ga.)

"I don't like intrigue and it's a dangerous job." (Man, 78, Lake Geneva, Wisc.)

-- NOTE --

Allowance for persons not at home was made by means of a "times-at-home" technique rather than by "call-backs." Either procedure is a standard method for reducing the sample bias that would otherwise result from under-representation in the sample of persons who are difficult to find at home. All results reported, including the composition of the sample, are based on data in which a "times-at-home" weighting has been incorporated.

DESIGN OF THE SAMPLE

The design of the sample is that of a single stage, replicated probability sample down to the block level in the case of urban areas, and to segments of townships in the case of rural areas.

After stratifying the nation geographically and by size of community in order to insure conformity of the sample with the latest available estimate of the Census Bureau of the distribution of the adult population, about 160 different sampling points or areas were selected on a strictly random basis. The interviewers had no choice whatsoever concerning the part of the city or county in which they conducted their interviews.

Approximately 10 interviews were conducted in each such randomly selected sampling point. Interviewers were given maps of the area to which they were assigned, with a starting point indicated, and required to follow a specified direction. At each occupied dwelling unit, interviewers were instructed to select respondents by following a prescribed systematic method and by a male-female assignment. This procedure was followed until the assigned number of interviews was completed.

Since this sampling procedure is designed to produce a sample which approximates the adult civilian population (21 and older) living in private households in the U.S. (that is, excluding those in prisons and hospitals, hotels, religious and educational institutions, and on military reservations), the survey results can be applied to this population for the purpose of projecting percentages into number of people. The manner in which the sample is drawn also produces a sample which approximates the population of private households in the United States. Therefore, survey results can also be projected in terms of number of households when appropriate.

SAMPLING TOLERANCES

In interpreting survey results, it should be borne in mind that all sample surveys are subject to sampling error, that is, the extent to which the results may differ from what would be obtained if the whole population surveyed had been interviewed. The size of such sampling errors depends largely on the number of interviews.

The following tables may be used in estimating the sampling error of any percentage in this report. The computed allowances have taken into account the effect of the sample design upon sampling error. They may be interpreted as indicating the range (plus or minus the figure shown) within which the results of repeated samplings in the same time period could be expected to vary, 95 per cent of the time, assuming the same sampling procedure, the same interviewers, and the same questionnaire.

The first table shows how much allowance should be made for the sampling error of a percentage:

Recommended Allowance for Sampling Error
of a Percentage

	In Percentage Points (at 95 in 100 confidence level)*						
	-----Sample Size-----						
	<u>1500</u>	<u>1000</u>	<u>750</u>	<u>600</u>	<u>400</u>	<u>200</u>	<u>100</u>
Percentages near 10	2	2	3	3	4	5	7
Percentages near 20	2	3	4	4	5	7	9
Percentages near 30	3	4	4	4	6	8	10
Percentages near 40	3	4	4	5	6	8	11
Percentages near 50	3	4	4	5	6	8	11
Percentages near 60	3	4	4	5	6	8	11
Percentages near 70	3	4	4	4	6	8	10
Percentages near 80	2	3	4	4	5	7	9
Percentages near 90	2	2	3	3	4	5	7

The table would be used in the following manner: Let us say a reported percentage is 33 for a group which includes 1500 respondents. Then we go to row "percentages near 30" in the table and go across to the column headed "1500." The number at this point is 3, which means that the 33 per cent obtained in the sample is subject to a sampling error of plus or minus 3 points. Another way

*The chances are 95 in 100 that the sampling error is not larger than the figures shown.

Another way of saying it is that very probably (95 chances out of 100) the average of repeated samplings would be somewhere between 30 and 36, with the most likely figure the 33 obtained.

In comparing survey results in two samples, such as, for example, men and women, the question arises as to how large must a difference between them be before one can be reasonably sure that it reflects a real difference. In the tables below, the number of points which must be allowed for in such comparisons is indicated.

Two tables are provided. One is for percentages near 20 or 80; the other for percentages near 50. For percentages in between, the error to be allowed for is between that shown in the two tables:

Recommended Allowance for Sampling Error
of the Difference

		In Percentage Points (at 95 in 100 confidence level)*			
TABLE A		<u>Percentages near 20 or percentages near 80</u>			
Size of Sample		<u>750</u>	<u>600</u>	<u>400</u>	<u>200</u>
750		5			
600		5	6		
400		6	6	7	
200		8	8	8	10
TABLE B		<u>Percentages near 50</u>			
Size of Sample		<u>750</u>	<u>600</u>	<u>400</u>	<u>200</u>
750		6			
600		7	7		
400		7	8	8	
200		10	10	10	12

Here is an example of how the tables would be used: Let us say that 50 per cent of men respond a certain way and 40 per cent of women respond that way also, for a difference of 10 percentage points between them. Can we say with any assurance that the 10-point difference reflects a real difference between men and women on the question? The sample contains approximately 750 men and 750 women.

Since the percentages are near 50, we consult Table B, and since the

* The chances are 95 in 100 that the sampling error is not larger than the figures shown.

two samples are about 750 persons each, we look for the number in the column headed 750 which is also in the row designated 750. We find the number 6 here. This means that the allowance for error should be 6 points, and that in concluding that the percentage among men is somewhere between 4 and 16 points higher than the percentage among women we should be wrong only about 5 per cent of the time. In other words, we can conclude with considerable confidence that a difference exists in the direction observed and that it amounts to at least 4 percentage points.

If, in another case, men's responses amount to 22 per cent, say, and women's 24 per cent, we consult Table A because these percentages are near 20. We look in the column headed 750 and see that the number is 5. Obviously, then, the two-point difference is inconclusive.
